

## Q1

1/1 point (ungraded)

Consider table Employee(name,dept,salary), and the SQL statement: update Employee set salary = salary+100 where dept='CS' Which of the following privileges on table Employee is NOT needed to execute this statement?

☐ update(salary)

☒ read(name)

☐ read(dept)

☐ read(salary)

### Explanation

Employee.name is not referenced in the SQL statement.
