

# Module quiz

Your score: 100%    Passing score: 66%

[Retake](#)

Congratulations! You passed this assessment.

**check**1. What is a key benefit of the Agent Development Kit (ADK) regarding infrastructure decisions?

☐ It only supports on-premise infrastructure.

**check** It allows you to avoid infrastructure decisions by deploying to Agent Engine.

☐ It requires extensive knowledge of cloud infrastructure.

☐ It requires developers to manage their own infrastructure.

Correct. It deploys to a fully managed runtime.

**check**2. What is the Agent Development Kit (ADK) primarily designed for?

☐ AI/ML architects training new model architectures.

☐ End users interacting with conversational agents.

☐ Business users with no coding experience.

**check** Developers building multi-agent systems.

Correct. The ADK is specifically designed for building multi-agent systems without the need for deep ML experience.

**check**3. What does the Agent Development Kit (ADK) provide regarding tools?

**check** Prebuilt, custom, and community tools.

- ☐ No tools, it focuses only on agent orchestration.
- ☐ Only prebuilt tools from Google.
- ☐ Only custom tools built from scratch.

Correct. The ADK supports various tool integrations.
